

Remote Pharmacy Services

Your connection to highly trained clinical pharmacists

Fast, High Quality Implementation

Our proven, non-invasive system for implementation ensures a smooth transition to our remote pharmacy clients with continuous communication, multi-department involvement and intensive team training, all in as little as 30 days with no start-up fees.

Cognitive Medication Management

Each order received is managed by a pharmacist licensed in your state. Our highly trained pharmacists have clinical expertise and can provide you with an average order turnaround time of less than 10 minutes.

Performance Metric Reporting

Each month we aggregate data directly from your pharmacy system and compile reports outlining key performance indicators for your facility. These reports include information such as: order volumes, breakdown of CPOE vs. written orders, turnaround times and call volumes. This information allows both the on-site pharmacy and HE to identify potential areas for improvement, evaluate staffing needs and proactively forecast workload.

“ You provide a great service. Your pharmacists are always friendly and helpful. Our nursing staff finds that they are very responsive when they contact your pharmacists with questions. We are appreciative of the way your staff reviews and catches problems within CPOE orders. ”

- PAT, DIRECTOR OF NURSING
